

Labour Shortages & QVscribe

A MASSIVE SKILL SHORTAGE IS COMING

A large portion of the labour force is approaching retirement age. **1 in every 4** employees in the US is considered a **mature worker**.

There won't be enough specialized, experienced engineers to compensate for the **75 million individuals set to retire** in the near future.

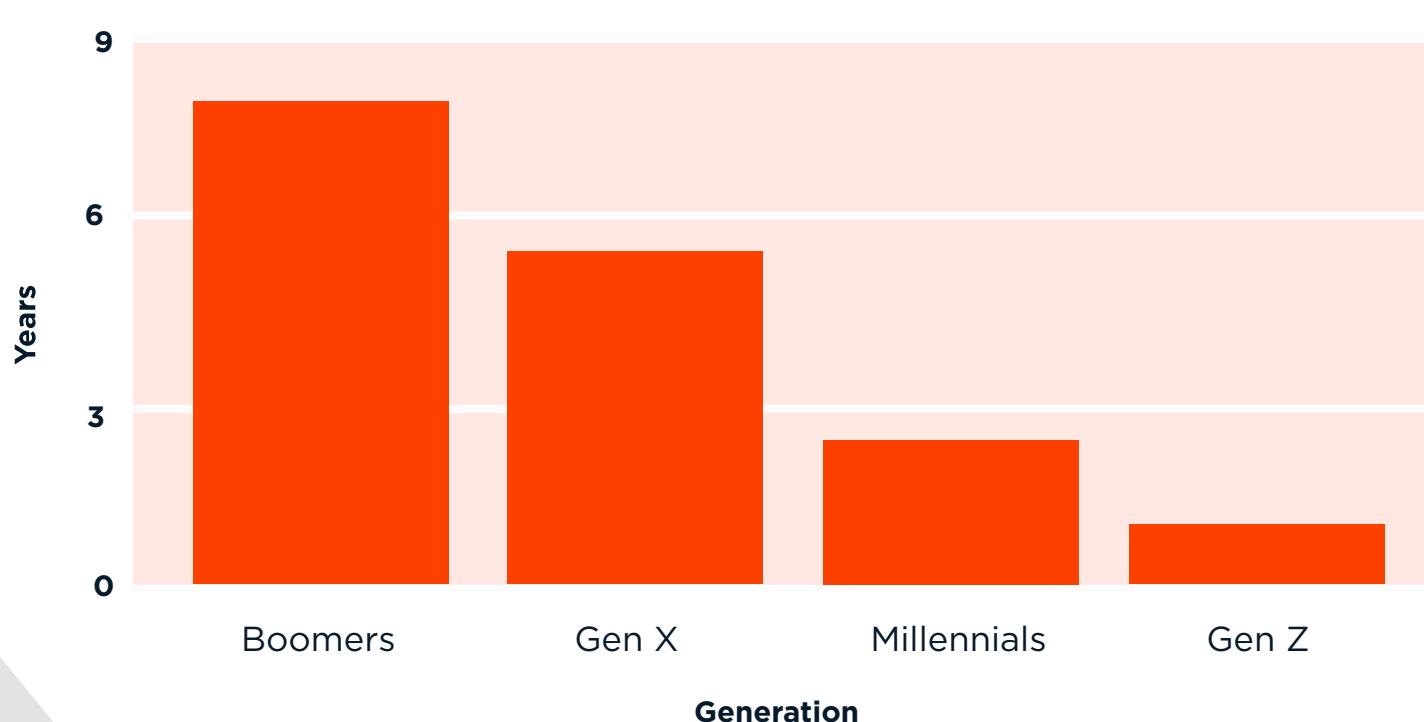

Experienced engineers bring more than technical skills, they bring years of **Legacy Knowledge**.

New engineers don't have the benefit of this knowledge. By necessity, they rely heavily on engineering requirements documentation.

Average Employment Turnover Time

The younger generations also spend less time with the same organization, leading to higher turnover rates.

How do you adapt to the higher turnover rate, and ensure requirements quality?

How do you preserve years of legacy knowledge?

Meet your newest teammate that remembers your **oldest industry rules** and **best practices**.

Meet QVscribe.

UTILIZING NATURAL LANGUAGE PROCESSING, QVSCRIBE CAN

1

Captures years of tacit knowledge
